AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (currently amended) A wireless day planner portfolio system, comprising:

a first communication device;

a second communication device;

a processor coupled to the first communication device and the second communication device; and

an interface coupled to the processor and the first communication device;

wherein the communication device, the second communication device, the interface, and the processor are coupled to one another;

wherein a first device that is physically remote from the interface may wirelessly communicate with the first communication device; ~~and~~

wherein a second device that is physically remote from the interface may wirelessly communicate with the second communication device~~.~~; and

wherein the first device is adapted to wirelessly communicate with the second device via at least the first communication device or the second communication device.

14. (currently amended) A wireless portfolio, comprising:

a communication device;

a processor coupled to the communication device;

an interface coupled to the communication device; and

a data entry system coupled to the interface;

wherein a first device that is physically remote from the interface is adapted to ~~may~~ wirelessly communicate with a second device that is physically remote from the interface via the communication device.

20. (currently amended) A wireless day planner portfolio system, comprising:

a means for transmitting a wireless communication signal between a first device and a second device that are physically remote from an interface coupled to a communication device; and

a means for monitoring a wireless communication status related to the wireless communication signal, wherein the status comprises at least one of a following indicator from a group comprising:

a strength of transmission;

a speed of transmission;

a quality of transmission;

a direction of transmission; and

a service level.

22. (currently amended) A wireless day planner portfolio system, comprising:

a wireless transceiver;

an infrared transceiver;

a processor coupled to the wireless transceiver and the infrared transceiver;

an interface coupled to the processor and the wireless transceiver; and

a plurality of light emitting diodes (LEDs) coupled to the processor;

wherein the wireless transceiver, the infrared transceiver, the interface, and the processor are coupled to one another;

wherein a personal digital assistant (PDA) coupled to the interface may wirelessly communicate with the wireless transceiver; ~~and~~

wherein an infrared device that is physically remote from the interface may wirelessly communicate with the infrared transceiver; ~~and~~

wherein the PDA is adapted to wirelessly communicate with the infrared device via the interface; and

wherein the plurality of LEDs depict at least one of a following status:

a wireless communication status between the wireless transceiver and a wireless network;

a wireless communication status between the wireless transceiver and the PDA; and

a wireless communication status between the infrared transceiver and the infrared device.

23. (currently amended) A wireless day planner portfolio system, comprising:

a first wireless transceiver;

a second wireless transceiver enabled for short range communication;

a processor coupled to the first wireless transceiver and to the second wireless transceiver; and

an interface coupled to the processor and the first wireless transceiver;

wherein a personal digital assistant physically remote and closely proximate to the interface and adapted to wirelessly communicate with the second wireless transceiver; and

wherein ~~the first wireless transceiver is adapted to communicate with a communication device that is physically remote from the interface such~~ a communication device that is physically remote from the interface is adapted to communicate with the first wireless transceiver such that the personal digital assistant and the communication device are enabled to wirelessly communicate with each other in real-time via the interface and the processor.
